Plasma Fibroblast

Plasma Fibroblast is a beauty enhancement procedure performed by licensed medical aesthetician and certified technician; Andrea Rozanek, who uses an FDA cleared device called Plasma Pen to shrink the skin using a sterile, disposable probe.

Fibroblasts are the collagen producing cells in the skin. Fibroblast treatment is performed with a device called Plamere Plasma Pen, which is used to produce plasma waves. The waves are directed as tiny light spots along the wrinkle lines. The tip of the pen never touches the skin. The pen is held above the skin and a tiny plasma arc connects the tip of the device to the surface of the dermis. Using plasma waves, the old collagen is removed by sublimation (evaporation), and fibroblasts are stimulated to produce new collagen. The targeted skin contracts and is essentially eliminated without any cutting, which results in the tightening and shrinking of the targeted skin.

This advanced procedure helps to revive natural levels of the Collagen, Hyaluronic Acid and Fibronectin needed for fresh youthful skin. A series of tiny brown spots are strategically placed to attain the desired result. The skin around the dot tightens instantly, pulling the cells closer together.

No over tightening will occur. The evaporated old collagen is seen as tiny brown scabs on the treated area. The tiny "microdot", brown scab or protective crust, or carbon crust on the surface will fall off on their own in approx. 5-10 days.

It is very Safe, low-risk, and highly effective. As with most cosmetic treatments, a consultation with an experienced, trained practitioner prior to service, as well as a strict aftercare routine, is required to promote proper healing and to help you achieve the maximum results. Results can be seen in 6 to 8 weeks.

Plasma Fibroblast Consent

When initialing and signing, you are stating that *you understand and* accept the terms of this treatment.

•	You have chosen a cosmetic procedure that is not medically necessary.	Initials:
•	Plasma Fibroblast is an art process-not an exact science- and can not guarantee an exact shrinkage result due to individual skin elasticity and healing process.	Initials:
•	You may be required to return for additional treatments before your overall procedure is deemed complete. The payment and time frames for any additional work will be discussed and agreed upon prior to the treatment commencing. Dependent on the area of treatment, additional treatments can not be performed sooner than 4 weeks or later than 8 weeks after the initial and subsequent visits. It is imperative for the area to fully heal prior to additional treatments.	Initials:
•	A treatment plan record will be kept by Andrea Rozanek to record area's you have chosen, anesthetic used as well as pre and post treatment photos.	Initials:
•	The skin type of each guest is different, and the healing process may lead to mild discoloration of the skin.	Initials:
•	After each treatment, swelling and redness may occur. Some guests may experience extreme swelling. You will be given advice on how to reduce and minimize the risk.	Initials:
•	The treatment includes a small burn to the skin, you may experience a smell of charring. This is completely normal.	Initials:
•	You must adhere strictly to NO SUN EXPOSURE to the treated area following your treatment for 3 to 4 weeks. This is extremely important and will greatly reduce the risk of hyperpigmentation.	Initials:
•	The treated area must heal properly. Picking, plucking, scrubbing or manipulating the treatment area could make the treatment area appear uneven, discolored or scarred, requiring further treatments.	Initials:
•	Beware that cosmetic or medical skin altering procedures such as plastic surgery, implants, injectables and weight loss or gain may alter the Plasma Skin Tightening treatment look.	Initials:
pro	notographic Consent: I consent to photographs being taken before, during and after e ocedure. I agree to these photos will be used only with my written consent for promotic rposes.
